Frontend design architecture for **Fullerton for Self-employed professionals** is based on the Angular 5 design guidelines. To deploy the frontend application, we will provide the zip file with name “**dist.zip**”.

Note: The following steps have to be performed on the folder where the frontend site is being configured.

To deploy the application on the server following steps must be performed.

1. First Unzip the zip folder (right click on the folder → click ‘Extract Here’)
2. After Unzip is done, the folder with name **dist** is extracted.

Name	Date modified	Type	Size
dist	15-02-2018 10:59	File folder	
dist_14-2-18	14-02-2018 21:08	WinRAR ZIP archive	22,691 KB

3. The extracted dist folder consist of the following files.

Name	Date modified	Type	Size
assets	14-02-2018 21:05	File folder	
3rdpartylicenses	14-02-2018 21:05	Text Document	28 KB

4. All the above files have to be selected and pasted into the folder to which the site is being configured.
 5. Once all the files are pasted, refresh the site from the server before start browsing.
